

Jeg har 1 time for sent
Vigtig forelæsning mht. eksamen

Prototype-model v. exemplar-model

Exemplars

- Makes for fast responses. (without schemas)

Schema

★ In-group
- exemplar + prototype

★ Out-group
- only prototype

Top-down v. bottom-up processing.
Both can be used to categorize
unknown Others.
Usually we use both

Salmivalli paper

- Self- and peer perception impacts social goals
- Self-perception is not a good predictor of behaviour.
 - No correlation between self-perception and goals.
- Peer perception is not a good predictor of behavior
- Social goals is a good predictor of behaviour
- Self- and peer perception can predict behavior if studied together.
- Self-perception is related to agentic goals
- Peer-perception is... —||— ...Communal goals
- Self and peer perception can only predict behaviour when studied together
- Self + peer \Rightarrow Social goals

★

Figure 1

Viser en model af self + peer-perception og deres impact på 'goals' og 'goals' effekt på adfærd. Correlations with coefficients $\approx .30$ are weak, but maybe significant.

Gender differences

- Boys more agentic goals
- Girls more communal goals
- Well founded in science, has been studied for a long time.
- Huge debates: nature vs. nurture
- Difference is real, but why that is, is up for discussion.

Most important: dual perception of Social schema.

Dismissing: "I'm ok and you're not"
Secure: "I'm ok and you're ok"

Examen:

- Introduction skal baseres på kursuspå litteratur
- Teori-afsnittet kan inddrage nogle nye/andre artikler

Application

- Brugen af eksempler til at ændre prototyper
- Kan bruges ift. at skabe et godt arbejdsmiljø.
-

"Even though we perceive things categorically the world is not categorical!"

* Macrae (2000) "Thinking categorically about others".
- Vil være rigtig god til eksamen
